

SWIMMING POOLS

At Rigo Spa we offer a bespoke design, build and maintain service for all our swimming pool packages for both the domestic and the commercial market.

We can create your bespoke pool in all styles of construction from freeboard, deck level, semi-deck level and cascading to suit the style of your project.

We offer a variety of finishes to all our pools whether a liner, mosaic tiles, large format stone or even unusual finishes such as pebbles.

We only use market leading products both in the pool shell and the plant room, which are backed with large warranty periods for peace of mind.

As well as offering the above we can transform the traditional swimming pool with various features ranging from elegant step entrances, bespoke channel details, LED colour changing lighting effects, water neck massage cannons, automatic slatted and PVC coloured covers plus many, many more options.

Please view our further construction methods such as acrylic, fibreglass and tiled and stainless steel specification pages if you wish to explore further.

RIGO SPA

SKYPOOL

The Skypool is an innovative construction system comprised of either hot (**commercial**) or cold (**domestic**) galvanised steel panels. This system is manufactured from Astralpool, the world's swimming pool leaders.

All materials have been designed and chosen with three main principles in mind - durability, reliability and sustainability.

The Skypool has a range of standard sizes and shapes available for both domestic and commercial applications in both freeboard and deck level options but, this product is so versatile nearly any shape and design can be manufactured to suit any project.

Further to this, the commercial pool range is fully self supportive and can be installed to existing rooms/floors and as it is a lightweight product in relation to concrete pools provides further options for being installed off the ground floor, where necessary.

The pool is covered with an impermeable material known as a liner which ensures that the pool stays watertight. The liner is available in various colours with options for tile bands, patterns and lane markings if required.

Rigo Spa have a range of standard package prices available upon request but, if you require a bespoke quotation then please contact us for full design information.

RIGO SPA

STAINLESS STEEL POOLS

In addition to our range of mosaic tiled and acrylic products Rigo Spa offer a bespoke service for stainless steel products. Rigo Spa offer this for both the domestic and commercial market providing a full design, manufacture, installation and maintenance service.

Our stainless steel products can be installed above ground or below ground and/or can be tailor made to suit existing buildings if required from basements to rooftop skyscrapers.

The range is manufactured in 304L and 316L grade stainless steels making them extremely durable and also lightweight. Each pool is manufactured as a series of prefabricated panels and installed and sealed on site, again providing additional comfort where accessibility is limited. Spas are usually installed in one piece but, again where access is restricted they can be installed in-situ. This is particularly advantageous when replacing existing spas. The finished product can be left as an all stainless finish, partly tiled, fully tiled or lined.

Products for consideration:

Pools, spas, swimspas, and hydrotherapy pools all can be as freeboard, deck level, semi deck level or cascading finishes.

Why choose stainless steel?

The products do not crack unlike other materials, they do not corrode and are not effected by the chlorine/chemicals in the water, they weigh less than concrete, sometimes up to 25times lighter, they provide a quick installation time improving building programmes, they are a very flexible material providing endless options to suit any project and very importantly the panels are environmentally better than concrete as they are recyclable.
